

Manufacturing: NX 2-axis milling

Objective

This seminar covers the functionalities and opportunities provided by the Planar_Mill and Planar_Profile modules for 2-, 2 1/2-axis milling. The opportunities and functions are presented and simulated based on application scenarios. Special cases and practical experiences highlight the range of opportunities that the modules provide for daily application requirements. The training course finishes by introducing multi-axis milling based on the Master Model Concept.

Content

- 2-axis milling functionalities using the Planar_Mill module
- 2-axis profile machining functionalities using the Planar_Profile module
- Optimal operation.
- Final project (multi-axis machining) based on the Master Model Concept

Additional Requirements

Basics of NC processing technology as well as experience working with NX. Minimum requirements are the first 3 days of "Manufacturing 2: CAM basics".

Additional informations for the duration

Two additional days on-site are recommended in order to further explore the applications and increase efficiency. Additional days as required.

NX CAM Course

Duration

2 Days

Language

German

Documentation

German

Participants

- Production engineers
- NC programmers
- production planning employees

Required Trainings

- Manufacturing 2: NX CAM basics
