

JANUS goes Academic

Supporting the next generation of specialists!

Supporting future specialists in the field of digital manufacturing is a special concern of JANUS Engineering. Our goal is to contribute to an attractive and practical education and training of future specialists.

As a university, college or vocational school, you have the option to purchase special academic licenses with support services and maintenance for NX. For students, Siemens even offers a free NX Student Edition directly for download.

Future digital manufacturing experts are thus given the opportunity to use the software and the connection to the machine tool in practice early on in their training.

JANUS also supports universities, dual training centers and other academic institutions with an extensive range of products, services and training in the field of digital manufacturing with Siemens NX.

What we offer:

- Post-processors and machine simulations offered under favorable conditions
- Trainings and services
- Access to the JANUS E-Academy
- Additional products such as tool management & automation tools
- Know-how and decades of experience from the machining industry

JANUS realizes the digitalization of manufacturing. We secure the future in cooperation with industry, research and education. Together we make manufacturing processes more intelligent.

Interested in what we have to offer? We will be happy to advise you.
